

## Knowledge Base

# Disinfecting Your SMART Board™ Interactive Whiteboard

SMART Hardware

SMART Board™ 600 series interactive whiteboards

## Overview

The cleaning instructions in your SMART Board interactive whiteboard user's guide are adequate to handle most regular cleaning requirements. However, if you need to disinfect your SMART Board interactive whiteboard, follow the instructions below.

### NOTE

You can find regular cleaning instructions in your SMART Board interactive whiteboard user's guide, available for download from the [SMART Support website](#).

## Details

You can use a diluted bleach solution or household cleaners such as Fantastik®, Formula 409®, Windex® with Ammonia-D® or Mr. Clean® to disinfect your SMART Board interactive whiteboard.

### NOTE

Before you disinfect your SMART Board interactive whiteboard, shut down or disconnect the computer. Otherwise, you may scramble the desktop icons or inadvertently activate applications when you wipe the screen.

**To disinfect your  
SMART Board**

Wet a clean cloth with a solution of 10% bleach and 90% water (or with one of the cleaners listed on page 1), and then wipe the display surface, pen tray and any other surfaces you want to disinfect. Repeat as necessary.

---

## Background

SMART Board interactive whiteboards carry no more or fewer germs than other public surfaces such as door knobs or table tops. In environments where you need to regularly disinfect surfaces, follow the procedure above.
