

Working with Images

- Use personal, high-quality images for a polished, worry-free look
- Make sure students don't have parent requests on file that prohibit their directory information from being included on websites
- Be mindful of copyright and legal use of information; provide citations to give credit where due and link back to the owners' works or websites
- Images should be in a jpeg, a png, or a gif format
- Images can be inserted directly through Weebly; they can also be uploaded or inserted with an image URL ([demonstrate inserting image with URL](#))
- [Creative Commons](#) is a great search tool to use to find free images, but be sure to read and understand their disclaimer (<http://search.creativecommons.org/>); using this source would require you to cite sources and provide links for attribution
- Searching through Weebly allows you to find free Creative Commons images through Flickr that cite automatically
- [Flickr](#) can be searched directly from their site using the Creative Commons filter
- [Microsoft Office Clipart](#) requires a citation as well
- [Pixabay](#) offers high-quality images you can use anywhere.
- Weebly offers professional images for a fee; there are also websites that offer subscriptions and/or ways to purchase images and artwork (i.e. [Thistle Girl Designs](#), [DJ Inkers](#), etc.)
- Pinterest would likely be a valuable resource for finding free and paid images
- Google Images also offers search tools to assist users in finding images by usage rights
